3. The phospholipids molecules arrange themselves in a layer of two molecules thick which is called phospholipids bilayer. 4. Each phospholipid molecule has a polar head that gives it the hydrophilic property (like water) and a pair of non-polar tails gives it the hydrophobic property (dislike water)

1) In liquid, hydrogen bonds are weak, so water is the shape of the container. The molecules have no order, and very transient h bonds. 2) In solid, the low temperature causes very low kinetic energy, so the h bonds are strong enough to hold molecules in place. thThe average distance between each water molecule is larger, so ice is less dense than liquid water.
