## Three Phase Controlled Rectifiers

Interphase has three subphases: the G1 phase (“first gap”), the S phase (“synthesis”), and the G2 phase (“second gap”). During all three subphases, the cell grows by producing proteins and cytoplasmic organelles such as mitochondria and endoplasmic reticulum. However, chromosomes are duplicated only during the S phase.

12.2 LINE COMMUTATED CONTROLLED RECTIFIERS. 12.2.1 Three- phase half-wave rectifier The figure 12.1 shows the three-phase half-wave rectifier topology. To control the load voltage, the half wave rectifier uses three, common-cathode thyristor arrangement. In this figure, the power supply, and the transformer are assumed ideal.
