Chapter 14: System Safety Training

Introduction. Training Need Analysis (TNA) is the process of identifying the gap between employee training and needs of training. Training needs analysis is the first stage in the training process and involves a series of steps that reveal whether training will help to solve problem which has been identified.

Sofema Aviation Services considers the Challenges of Developing an Effective Training Needs Analysis in support of EASA Part 147 type training. All Maintenance Training Organisations are required to generate their own TNA (Training Needs Analysis) and syllabus to develop their type or basic training courses in accordance with regulation 1321/2014.

EASA Part 66 Exam - CAA International (CAAi)

Definition: Training Needs Analysis (TNA) is the process in which the company identifies training and development needs of its employees so that they can do their job effectively. It involves a complete analysis of training needs required at various levels of the organisation. Description: Technology is changing at a very fast pace and so are the training and development needs of employees.

By means of the Training Needs Analysis (TNA) the Organisation will then determine the total amount of hours required for each course. The Part-66 has a table (here Table-2) showing the minimum duration of the courses calculated for a generic aircraft (not a specific type) and in consideration of the estimated average duration of standard type courses imparted in Europe.
