On my 4 runner I ran one from the ignition circuit from the fuse block. Was pretty easy. However if the thief is willing to spend a little time it's fairly easy to bypass. A buddy of mine put one on his Tahoe and wired the switch into the brake relay to put it in gear.

TESTING. If spark occurs at the spark plug, the coil is functioning properly.

The ignition coil is found in the distributor on all models except the 2VZ-FE, 3VZ-FE and 1994-95 California 5S-FE and 1996 5S-FE engines. On most of these engines the coil is located on the left fender well, near the fuse block.

A heavy-duty magnetic switch, or solenoid, turns the motor on and off. It is part of both the motor circuit and the control circuit. Both systems are controlled by the ignition switch and protected by a fusible link. On some models, a starter relay is used in the starter control circuit.

The eventual objective is to go from the stock ignition to sequential fire with COP, all the while still allowing the use of the ignition tables controlled by the PowerFC. I assume I'll need to install a crank wheel / hall effect sensor. I would leave the cam sensor circuit for the cam position.
