-CIM cmdlets (see chapter 16). These commands do their own remoting because either the underlying infrastructure already supports remoting or they address scenarios that are of particular importance to system management. You need to supply only one or more computer names to use them against a remote target:

topic of this chapter. 7.1 Routed events In a classic .NET event, an interested party has to directly subscribe to an event in order to be noti-fied. For non-UI code, this makes a lot of sense. After all, there's no particular way for regular code to know who else might care and what legitimate rules may exist for passing events to other objects.

Cluster analysis is a data-reduction technique designed to uncover subgroups of observations within a dataset. It allows you to reduce a large number of observations to a much smaller number of clusters or types. A cluster is defined as a group of observations that are more similar to each other than they are to the observations in other groups. This isn't a precise definition, and that fact ...
