Strength of Materials 4th Edition by Pytel and Singer Problem

115 page 16 . Given. Required diameter of hole = 20 mm

Thickne: ss of plate = 25 mm Shear strength of plate = 350

MN/m. 2. Required: Force required to punch a 20-mm-diameter hole. Solution 115. The resisting area is the shaded area along the perimeter and the shear force . is equal to the punching force .

Normal stress develops when a force is applied perpendicular to the cross-sectional area of the material. If the force is going to pull the material, the stress is said to be tensile stress and compressive stress develops when the material is being compressed by two opposing forces.
